

Pfizer's End-to-End In-Transit Visibility (E2E ITV) project

I. Continuous improvement:

- +20% Critical shipments completed
- +40% Comments on critical shipments
- +45% Active users
- +260% Dashboard users
- +58% Yearly shipments
- +121% Tracked shipments

II. Roll out to other divisions or extension of scope:

- +180% Pfizer internal manufacturing plants
- +471% Contract manufacturing sites
- +19% Pfizer Markets
- +740 Third Party Customers added
- +12 External CMOs added
- +45% Unique SKUs

III. Driver of further supply chain optimization:

The full deployment of all functionalities of the Tableau Dashboard built on the TrackiT data is helping Pfizer to achieve additional tremendous improvements in terms of efficiency, timeliness and cost effectiveness for our Global Supply Chain Network.

Pfizer is leveraging the analytics together with the App to determine if and where the weakest links are located in the logistics network and proactively strengthen to ensure that zero defects, 100% on-time and patient centricity approach is achieved. Through its many users, further optimization of actual goods delivery dates will result in better management of customers' expectations, increased efficiency and optimizing the employed resources.
